DESCRIPTORS: *Integrals, *Differential equations,
Particles, Motion, Theory.

The existence of an integral is established for the
total energy, of a dynamically changing point (a parti-
cle of "variable mass") for the case, when the abso-
lute velocity of each particle of the system is collinear
and equal to one half of the velocity of the point in
phase space. Under this condition, the integral curves
of the equations of motion of the dynamically changing
point coincide with the geodesic curves in the con-
(ferred Riemannian space. (Author)

A new method is described for the experimental investigation of the p-v-t relations of gases, based on the use of a nonballast piezometer, and the determination of the quantity of gas by means of a separable container filled with an adsorbent. The results are given of the investigation of the p-v-t relations of carbon dioxide. (Author)

DESCRIPTORS: *Ammonia, Physical properties, Numerical analysis, Equations of state, Specific heat, Viscosity, Thermodynamics

Experimental and calculated data relating to thermo-dynamic and thermo-physical properties of NH₃ are treated by numerical and graphical methods. The results of this treatment are presented in the form of detailed tables of the properties of ammonia. (Author) (Physics--Thermodynamics, TT, v. 8, no. 7)

DESCRIPTORS: *Water, Equation of state, Entropy,
Enthalpy, Experimental data.

An equation of state for water is proposed, arrived at
from experimental data for specific volumes. Calculations
are given for specific volumes, entropy, enthalpy and thermal capacity c_p of water for rounded tem-
perature and pressure values. Parameters are also
determined for the inversion curve. (Author)
